"Primary Cystadenoma Originating From the Seminal Vesicle."

Acta Chirurgica Hungarica, Vol. 37, No. 1, Feb. 67, pages 55-57.

(from: Hungarian Journal of Hungarian Surgery) A case of primary Follinococcus
cystadenoma (Hungarian surgery) A case of primary Follinococcus
cystadenoma reported which was located in the retrovesical space and
originated from the right seminal vesicle. In the course of explorative
operation no tumor or primary U. cyst in the abdominal organs nor any
hyperplasia, adenoma or primary U. cyst in the abdominal organs nor any
deteriorated remnants of it could be found. The cyst with the size of an
orange, except from contact together with the seminal vesicle. 5 Hungarian.
Hungarian, 12 weeks old, preoperatively.

TITLE : The Determination of Phenylacetic Acid in Fermentation Juices
CRIT. PUB. : Acta Pharmac Hung, 28, No 3, 125-133 (1958)
ABSTRACT : The phenylacetic acid (I) is separated from the juices by perforating [sic] the latter with CCl_4 , extracting with 0.25 N NaOH, acidifying with 5% $KMnO_4$ (2-3 drops, for the removal of organic substances), the aqueous layer is repeatedly extracted with petroleum ether, the ether extract is nitrated for about 15 min at 40-44°, neutralized with NaOH, and reduced with a solution of 1% ascorbic acid; after 10 min, the solution is analyzed photometrically. The presence of benzaldehyde,

TITLE: Histological examination of sediments obtained by differential centrifugation

SOURCE: Kiserletes orvostudomany, v. 17, no. 6, 1965, 656-658

TOPIC TAGS: histology, sedimentation separation, centrifugation

ABSTRACT: When the sedimentation obtained by differential centrifugation is imbedded with suitable orientation in a piece of tissue and histological slices are made from them, a cross-sectional picture of the sediment will be obtained. The components can be stained by histological, histochemical methods; useful information can be gained in this manner concerning the sedimentation conditions. The method used by the authors is described in detail in the article. Orig. art. has:

Significance of arterectomy in treatment of arterial
occlusion MAG. SEBÉSZET. 1954, 7/5 (348-352) Graphs 1 Illus. 5

A follow-up of 10 patients (one with Bürger's disease, 9 with arteriosclerosis)
underwent arterectomy more than one year ago. The operation was indicated if
a sympathetic block succeeded in improving the circulation. Improvement after
operation was observed in 9 cases, in one case amputation was necessary. The
improvement appears gradually, often only after weeks or months; it is constant.

Surgical treatment of hypertension in renovascular disease.

Budapest, Orvosi hetilap, Vol 101, no 16, p 1165-1170, 1979.

Abstract: (Archives Hungarian and International) Two cases of surgical treatment in renovascular hypertension are presented. In the first case, two operated cases are described, in one of these revascularization of the kidney was unsuccessful and nephrectomy was performed with a subsequent normalization of the hypertension. In the second case, the narrowing of the renal artery was corrected by endarterectomy and local plastic surgery. In addition to the normalization of blood pressure, a considerable improvement in renal function was also demonstrated in this case. 3 Eastern European, 22 Western references.

SOLTI, F.

✓ Effect of change of the effective circulating blood volume
on renal salt excretion and diuretics by normal men and
patients with decompensated heart disease. Gy. Szabó,
M. Foldi, F. Solti, J. Rév, I. Márton, and K. Tornayei
(Univ. Clinic, Budapest). *Acta Med. Acad. Sci. Hung.*
10, 1-14(1956)(in German).—In normal men reduction of
circulating blood vol. reduced the glomerular filtration rate
and water and salt excretion. Stimulation of circulation
increased the filtration rate and excretion. Patients with
decompensated heart disease and edema reacted in the
opposite way; increasing the circulating blood flow de-
creased the filtration rate and the excretion of water and
salt and decreasing the flow increased the rate and excre-
tion. Cf. following abstract. H. L. Williams

6

SOLT. 1/2 F

✓ Role of humoral factors in the decline of water and salt excretion through change of the effective circulating blood volume. Gy. Szabó, J. Rév, and F. Solti (Univ. Clinic, Budapest). *Acta Med. Acad. Sci. Hung.* 10, 15-22 (1955) (in German).—The effect of variation of the effective circulating blood vol. in patients with diabetes insipidus was the same as in normal persons; an increase in the flow caused an increase in glomerular filtration rate and salt and water excretion. The antidiuretic substance of normal plasma paralleled the change in renal behavior, i.e. increased antidiuretic substance, as measured on rate, with increased rate of circulation of the blood. The reverse was true for the changes in the antidiuretic substance of the plasma of patients with decompensated heart disease. It is suggested that the effective substance is the antidiuretic hormone of the posterior pituitary gland. Cf. preceding abstract.

3418. Influence of breathing O₂ on renal function in decompensated heart disease. M. I. Ishii, T. Saito, H. Gulyayev, K. Nagyosi, J. Horvath, and J. Szasz Kha. *Woch Med Univ. 1959, 21, 857-859* (in Med. Univ. Akad., Budapest, Hungary).—Studies of renal function in cases of decompensated heart disease have been carried out by the usual techniques. An increase of the hypoxia causes a renal function to improve. Administration of the hypoxia causes a renal function to change in the direction of normal. In normal subjects hypoxia produces changes in renal function similar to those found in patients with decompensated heart disease. *Commentary: G. W. FARNER*

1306. *ECG and blood pressure changes following solitary necrotic lesions of the myocardium in dogs* Izolált szivizomnekrosist követő EKG és nyomásváltozások vizsgálata kutyában. SOLTI F. and ZADORY E. Orvostud. Egyet. I. sz. Belklin., Budapest Kisér. Orvostud. 1957, 9/3 (271—279) Graphs 5 Tables 4

Necrotic lesions were placed by the use of an electrical instrument at definite places in the atria or ventricles. With exclusively atrial necrosis the ECG showed changes in shape of the P-wave and often arrhythmias (atrial and ventricular extrasystoles and sometimes fibrillation). Ventricular lesions were not followed by any characteristic ECG changes, but arrhythmias were sometimes observed. The arterial pressure, the systemic venous pressure and the pressure in the right atrium and right ventricle were practically unaltered by either atrial or ventricular lesions. Repeated damage, especially of the left ventricle, often led to irreversible ventricular fibrillation.

1796. EFFECT OF SYMPATHICOLYTIC DRUGS ON RENAL FUNCTION DISTURBANCES IN ELECTROCONVULSIVE THERAPY - Die Beeinflussung der Nierenfunktionsstörungen beim therapeutischen Elektroshock durch sympathisch wirkende Mittel - Szabó G., Földi M., Solti F., Fejér A. G. and Karsai G. 1. Med. Univ.-Klin. und Landesanst. für Nerven- und Geisteskrankh., Budapest - Z. GES. INN. MED. 1957, 12/13 (617-620) Graphs 2 Tables 1

The observations were made on mental patients treated with chlorpromazine (12 cases) and *N*-(2-chloroethyl)dibenzylamine ('dibenamine') (4 cases). After 3 or 4 clearance periods the observations were suspended and ECT carried out. After the convulsion the clearance measurements were resumed. The results showed that the effects of ECT on renal function (reduction of RPF and GFT) are mitigated by pretreatment with the above-named drugs.

2962. The effect of dibenamine on the increased excretion of water, sodium and potassium in sweat caused by strophanthin SOLTI E., RÉV J., MÁRTON L., RÉFI Z. and KOLTAY E. 1st Dept. of Med., Med. Univ., Budapest. *Acta med. Acad. Sci. hung.* 1958, 12 3-4 (305-309) Tables 3

The action of strophanthin on sweat secretion was almost completely blocked by *N*-(2-chloroethyl)dibenzylamine; the increase in excretion of Na and K did not take place and the increase in volume of sweat was reduced. The action of strophanthin sweat secretion may occur, at least in part, via the autonomic nervous system. (11, 18)

EXCERPTA MEDICA Sec 2 Vol 12/1C Physiology Oct 59

4897. THE EFFECT OF STROPHANTHIN ON THE CEREBRAL CIRCULATION
AND ON THE POTASSIUM HOUSEHOLD OF THE BRAIN - Solti F.,
Marton I., and Koltay E. 1st Dept. of Med., Med. Univ., Budapest -

ACTA MED. ACAD. SCI. HUNG. 1958. 12/3-4 (311-315) Tables 2

- Studies on the isolated cranial (cerebral) circulation showed a slight decrease of cerebral vascular resistance and a slight increase of blood flow in response to strophanthin. A release of K from brain cells in response to strophanthin, leading to a significant rise of K concentration in the cerebral venous outflow, was demonstrated.

2452. The coronary sinus rhythm Über den Koronarsinusrhythmus. SOLTI F. and MARTON St. I. Med. Klin., Budapest Z. ges. inn. Med. 1958, 13/17 (674-678) Graphs 8

The authors report 8 cases with inverted P-waves in the standard leads II and III. The PQ-interval was normal or only slightly shortened. An origin of the stimulus in the neighbourhood of the coronary sinus is assumed. In single cases oesophageal leads have also been used. Except in one case no other patients showed any pathological findings of the cardiovascular system.
